

Driving with night vision can be difficult. Even the highest performing image intensification system requires ambient light to function. U.S. Night Vision's Blackout™ Infrared Filters use a vehicle's existing headlights to provide "covert illumination," making travel safer and faster.

Our unique polymer-blend is heat and impact resistant, and effectively blocks over 99 percent of visible light from the headlight source. Each filter is designed to fit its specified military vehicle using existing mounts, allowing the driver to easily go from tactical to white-light configurations as needed.

- Durable & Long Lasting
- Non-Reflective Matte Finish
- Temperature & Chemical Resistant
- Quick & Easy To Install
- Covert 850 nm Operation
- Works With All I² Night Vision
