Blackout™ Infrared Filter Kit HMMWV Part No- 000137

Quick Detach Headlight Filters Are Standard

Blackout™ Infrared Filter Vehicle Kits

Tactical vehicle operations at night can often be difficult due to a lack of illumination. Driving with just NVG's not only slows down your element's rate of movement, but also makes recognition more difficult and increases your risk of fratricide. US Night Vision's Blackout Filter Kits™ for the HMMWV, Army 5 ton, Army 2^{1/2} ton and the Marine Corps 7 ton are an instant force multiplier for nighttime tactical vehicle operations. Each Blackout Filter provides as much IR illumination, when seen through night vision, as a vehicle's headlight seen by the naked eye at night; facilitating a safer, faster and more efficient means of travel. Blackout Filter kits come complete with two IR headlight filters, two IR taillight filters and blackout covers for all running lights. Parts for each individual kit are listed below.

Each HMMWV kits comes with:
2 Ea. IR headlight filters (850 nm)
2 Ea. IR tail light filters (850 nm)
2 Ea. orange headlight covers
4 Ea. running light covers
Nylon kit bag, instruction manual
and mounting screws included.
