known throughout the  
world for their quality and  
durability.*

*Our commitment to  
customer service will  
ensure your satisfaction.*

- \* Extended Detection Range
- \* Easy Installation
- \* CCTV Compatible

Prevent the unthinkable. The risk of theft, terrorism, and crime is an increasing concern, so corporations and government agencies require complete confidence that sites are fully secured, both day and night. That's why valuable assets, employees and information are now being protected using the most advanced surveillance technology available today—thermal imaging. The L-3 Thermal-Eye™ Thermal Security Cameras—the TSCSS and TSCXP—use thermal imaging to detect objects hidden in unlit areas or people lurking in shadowed corners that are invisible to the naked eye and virtually indistinguishable with other technologies. Thermal cameras provide complete visibility in the darkest of nights, on the water and even in bad weather. The Thermal-Eye Thermal Security Cameras operate alone and are uniquely designed to fit within almost any standard enclosure and the installation takes just a few minutes. Raytheon's line of security cameras gives the benefits of thermal imaging in a package that is specifically designed to fit into existing CCTV security architecture making implementation easy and hassle-free. The extended detection range of the Thermal-Eye Thermal Security Cameras allow for effectively monitoring of larger areas per camera, and therefore require less investment for larger perimeter sites compared to other surveillance technologies.
